# Document identity and use

FIRST EDITION MANUSCRIPT - Prepared for Aerospace Federation review

| Field | Controlled identity |
|---|---|
| Document | AF-WI-9600-001 - Verify Function, Model and Authority Identity |
| Parent standard | AF 9600 - Artificial Intelligence, Autonomous Systems & Interoperability |
| Edition / language | FIRST EDITION / English master text |
| Family | Work Instructions |
| Primary source anchors | 5, 27, 33; Annexes C, I, L |
| Suggested local owner | Authorized task operator |
| Authority | Publisher approval and effective date are not assigned. Local use requires authorized adoption and completed parameters. |

## Use with the main standard

This document implements the identified AF 9600 clauses and annexes. Read the complete applicable requirements in the main standard. The source anchors are navigation references; a template does not replace technical judgement, evidence, permission or eligible approval.

AF-ML-9600-001 lists the complete supporting set. AF-CM-9600-001 maps the main clauses and annexes to working documents. AF-TP-9600-001 establishes the common local parameter baseline; add the relevant discipline profiles.

## Record control

Identify the object, configuration, record owner and dates. Reference attachments by stable identifier and version. Keep superseded evidence and decisions traceable. Use the approved local retention, access and authentication arrangements. No technical limit, numerical limit, interval or acceptance value is assigned by a blank template.

Interactive record: Complete the fields in a PDF reader that supports AcroForms. Save a working copy and verify that entries remain visible after reopening. Link controlled continuation sheets when space is insufficient; every row requires its own evidence and disposition. Typed names identify people but are not self-authenticating signatures.

# 1 Authorized task and prerequisites

Use this instruction only with the current approved local procedure, actual object/configuration and competent role. Read the source requirements and applicable technical profile before the task. Confirm required permissions, protective conditions, evidence access and record route.

| Step | Operator action |
|---|---|
| 1 | Identify the actual target, function, site and operating mode. |
| 2 | Compare model, data, runtime and permissions with the approved baseline. |
| 3 | Confirm current domain, compatible peers and responsible authority. |
| 4 | Record discrepancies without relabeling them as accepted configuration. |
| 5 | Continue only within verified identity and permitted authority. |

**Decision control:** Stop the dependent task when target identity, domain or authority is unresolved.

# 2 Task record and handoff

Record the actual action and result. Retain deviations, uncertainty and open items. The receiving owner confirms the bounded result and any blocked decision.

**Task ID, function/setup, procedure baseline, operator and time**

**Observations, completed steps, evidence IDs and discrepancies**

**Protective action, escalation, eligible review and next permitted activity**
